

Decorating Instructions

Carve a circular opening from the bottom of your pumpkin. Clean out the seeds and strings with the Scraper Scoop™. Scrape inner pulp away from the area you plan to carve until the pumpkin inner wall is about **1" thick**.

Trim the pattern and tape it to your pumpkin. Make pattern fit smoothly by folding on the crease lines shown on the pattern. Tape the folds in place.

Using the blunt end of the paint brush or a dull pencil, transfer the design outlines. Apply firm pressure to indent the pumpkin's surface.

Hold the pumpkin in your lap. Hold the saw like a pencil and saw steadily with an up and down motion at a 90° angle to the pumpkin with gentle pressure. The saw is breakable if used incorrectly.

Paint black and silver areas.

Paint on additional features with stencils. If desired, create accents by pressing in silver beads.
