

Carving Instructions

Carve a circular opening from the bottom of your pumpkin.

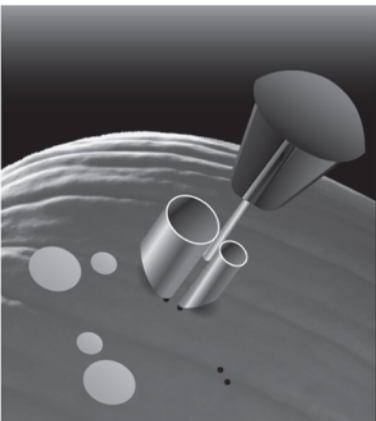

Clean out the seeds and strings with the Scraper Scoop™. Scrape the area you plan to carve until the pumpkin wall is about 1/2" thick.

Trim the pattern and tape it to your pumpkin. Make pattern fit smoothly by folding on the crease lines shown on the pattern. Tape the folds in place.

Use the poker to make pairs of holes in the pumpkin's surface.

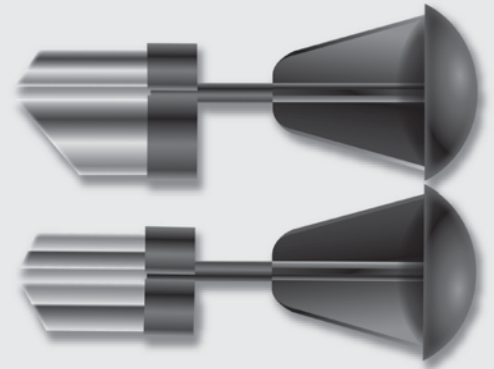

Align the punch with each pair of holes and push the punch all the way through the shell.

Place a battery-operated light* in the bottom, and watch your carving come to life!

Carving Tools

The Punching Tools

are for punching out simple and intricate designs.

The Scraper Scoop™

quickly cleans out seeds and strings and thins the walls of thick pumpkins. This makes carving easier, cleaner and faster.

The Safety Saw

is for cutting the lid and carving simple designs.

The Poker

can be used for pattern transfer.

Tip: If you are having difficulty punching through the surface of the pumpkin, try dipping the edge of the punch tool in vegetable oil.
